

HalaTuju

Project Description

Project Name: ***HalaTuju***

Team Name: ***Bubble Berry***

SDG: ***4 – Quality Education***

In early 2026, the Malaysia Ministry of Education have announced they will introduce a new Malaysia Learning Matrix (MPM) and required schools to offer specific stream which is STEM Packages (A&B), art and humanities, TVET and vocational and business and account. The general idea of our project which is HalaTuju AI is to replace the confusing of choosing school streams with an intelligent, data-backed personal roadmap. It helps student to understand their strength and identify weakness in early stage to prevent them making a wrong choice.

This project is aligned with the purpose of SDG 4 as it promotes Quality Education by ensuring students don't drop out or lose interest because they stuck in the wrong stream. Furthermore, the usage of AI to determine the streams and help in teaching student as it provides a human-like explanation that doesn't include answer of the question instead of a cold and straight away answer.
